

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
UI_SALESLISTPAGE_ADMIN_01	Verify that "Sell Plant" button is visible to the admin.	Test admin-only feature availability of the "sell plant" button for admin users.	1) Admin is successfully logged in to the system, 2) User is on Sales List Page	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to sales list page	1) Login succeeds, 2) Successful navigation to sales list page, 3) Visible "Sell Plant" button on the page		UI	Not Executed	215563E	
UI_SALESLISTPAGE_ADMIN_02	Verify that confirmation prompt appears when admin performs delete action.	Test the display of a confirmation prompt when the admin clicks the delete button.	1) Admin is successfully logged in to the system, 2) User is on Sales List Page, 3) User Performs the delete action by clicking the "Delete" button	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to sales list page, 4) Clicks the delete button	1) Login succeeds, 2) Successful navigation to sales list page, 3) Clickable delete button appearance on the page, 4) Appearance of confirmation prompt after clicking the "Delete" button.		UI	Not Executed	215563E	
UI_SELLPLANTPAGE_ADMIN_03	Verify plant dropdown contains available plants and current stock.	Test Plant dropdown content, stock visibility, and formatting.	1) Admin is successfully logged in to the system, 2) User is on the sell plant page	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to sell plant page, 4) Click the plant dropdown	1) Login succeeds, 2) Successful navigation to sales list page, 3) Visible "Sell Plant" button on the page		UI	Not Executed	215563E	
UI_SELLPLANTPAGE_ADMIN_04	Verify error message is displayed when quantity exceeds current stock.	Test error message display for unsuccessful sales request due to insufficient stock.	1) Admin is successfully logged in to the system, 2) User is on the sell plant page, 3) User performs selling action with exceeded quantity	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to sell plant page, 4) Carry out selling process for a corresponding plant with quantity exceeded current stock	1) Login succeeds, 2) Successful navigation to sales list page, 3) Display an error message when quantity exceeds current stock		UI	Not Executed	215563E	
UI_SELLPLANTPAGE_ADMIN_05	Verify navigation back to sales list page when cancel button is clicked.	Test the functionality of the cancel button.	1) Admin is successfully logged in to the system, 2) User is on the sell plant page	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to sell plant page, 4) Click the cancel button	1) Login succeeds, 2) Successful navigation to sales list page, 3) Clickable "Cancel" button, 4) Navigation to sales list page when "Cancel" button is clicked		UI	Not Executed	215563E	
UI_SALESLISTPAGE_USER_01	Verify regular user can view their sales records as a paginated list.	Test the content, pagination, and formatting of the sales records.	1) User is successfully logged in as a non-admin user, 2) User is on the sales list page, 3) Retrieved available sales records from the backend	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate sales list page	1) Login succeeds, 2) Successful navigation to sales list page, 3) Visibility of sales records as a paginated list		UI	Not Executed	215563E	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
UI_SALESLISTPAGE_USER_02	Verify display of "No sales found" when no sales records exist.	Test the display message when no sales records are available.	1) User is successfully logged in as a non-admin user, 2) User is on the sales list page, 3) Successful API request to retrieve sales records	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate to sales list page	1) Login succeeds, 2) Successful navigation to sales list page, 3) Visibility of "No Sales Found" message on the page		UI	Not Executed	215563E	
UI_SALESLISTPAGE_USER_03	Verify default sorting as "sold date" when the sales page is loaded.	Test whether sales records are sorted by sold date by default on page load.	1) User is successfully logged in as a non-admin user, 2) User is on the sales list page	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate to sales list page	1) Login succeeds, 2) Successful navigation to sales list page, 3) Visibility of sorting option, 4) Sorting option is set to "sold date" when the page is loaded		UI	Not Executed	215563E	
UI_SALESLISTPAGE_USER_04	Verify availability of other sorting options on the page.	Test the presence and accessibility of additional sorting options.	1) User is successfully logged in as a non-admin user, 2) User is on the sales list page	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate to sales list page, 4) Click the sorting option	1) Login succeeds, 2) Successful navigation to sales list page, 3) Visibility of sorting options when sorting icon / button is clicked		UI	Not Executed	215563E	
UI_SALESLISTPAGE_USER_05	Verify that delete action is not visible to the regular users.	Test the regular users cannot see or access the delete functionality.	1) User is successfully logged in as a non-admin user, 2) User is on the sales list page	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate to sales list page	1) Login succeeds, 2) Successful navigation to sales list page, 3) Non-visible "Delete" button		UI	Not Executed	215563E	
API_POST_SELL_PLANT_01	Verify that successful sell plant request with valid plant id and quantity	Test successful sale creation with valid plant id and sufficient stock.	1) Admin authentication token, 2) Values for valid plant id and sufficient stock	1) Add valid admin authorization token, 2) Add valid payload, 3) Send POST request to /api/sales/plant/{plant_id}	1) Status Code 201, 2) Reduction of quantity related to plant id		API	Not Executed	215563E	
API_POST_SELL_PLANT_02	Verify the validation of exceeded plant quantity	Test business logic validation for exceeded stock quantity.	1) Admin authentication token, 2) Valid plant id	1) Add valid admin authorization token, 2) Add valid plant id and exceeded quantity, 3) Send POST request to /api/sales/plant/{plant_id}	1) Status Code 400		API	Not Executed	215563E	
API_DELETE_SALE_03	Verify that successful deletion request with valid plant id	Test successful sale deletion with valid plant id.	1) Admin authentication token, 2) Valid sales id	1) Add valid admin authentication token, 2) Add valid sales id to the payload, 3) Send DELETE request to /api/sales/{id}	1) Status Code 204		API	Not Executed	215563E	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
API_POST_SELL_PLANT_04	Verify the validation of quantity >= 1	Test input validation for quantity field.	1) Admin authentication token, 2) Valid plant id	1) Add valid admin authentication token, 2) Add valid plant id and quantity that is less than 1, 3) Send POST request to /api/sales/plant/{plant_id}	1) Status Code 400		API	Not Executed	215563E	
API_GET_SALES_05	Verify that retrieval of all the available sales records	Test retrieval of all sales records with valid admin credentials	1) Admin authentication token	1) Add valid admin authentication token, 2) Send GET request to /api/sales	1) Status Code 200 with valid response		API	Not Executed	215563E	
API_GET_PAGINATEDSALES_01	Verify that successful retrieval of sales records as paginated list if sales records are available	Test paginated retrieval of sales records when records are available	1) Non-admin authentication token	1) Add valid non-admin authentication token, 2) Add valid payload, 3) Send GET request to /api/sales/page	1) Status Code 200 with valid response		API	Not Executed	215563E	
API_POST_SELL_PLANT_02	Verify unauthorized access to plant selling with user related token	Test authorization validation for plant selling endpoint using a regular user token.	1) Non-admin authentication token, 2) Valid plant id and quantity	1) Add valid non-admin authentication token, 2) Add valid plant id and quantity, 3) Send POST request to /api/sales/plant/{plant_id}	1) Status Code 401 with Unauthorized access		API	Not Executed	215563E	
API_DELETE_SALE_03	Verify unauthorized access to delete sales with user related token	Test authorization validation for sale deletion endpoint using a regular user token,	1) Non-admin authentication token, 2) Valid plant id	1) Add valid non-admin authentication token, 2) Add valid sales id, 3) Send DELETE request to /api/sales/{id}	1) Status Code 401 with Unauthorized access		API	Not Executed	215563E	
API_GET_SALES_04	Verify that successful retrieval of sales with valid sales id	Test retrieval of a specific sales record using a valid sale id.	1) Non-admin authentication token, 2) Valid sales id	1) Add valid non-admin authentication token, 2) Add valid sales id, 3) Send GET request to /api/sales/{id}	1) Status Code 200 with valid response		API	Not Executed	215563E	
API_GET_PAGINATEDSALES_02	Verify successful retrieval of sales records as paginated list for different sorting options	Test paginated retrieval of sales records with different sorting option	1) Non-admin authentication token, 2) Valid sorting option	1) Add valid non-admin authentication token, 2) Add valid sorting option to the payload, 3) Send GET request to /api/sales/page	1) Status Code 200 with valid response		API	Not Executed	215563E	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
UI_CATEGORYPAGE_ADMIN_01	Verify "Add Category" button is visible to admin users	Test admin-only visibility of Add Category button	1) Admin is successfully logged in to the system, 2) User is on the category list page	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to category page	1) Login succeeds, 2) Successful navigation to category list page, 3) Visibility of "Add Category" button on the page		UI	Not Executed	215506J	
UI_CATEGORYPAGE_ADMIN_02	Verify admin can search category by category name	Test category search functionality using valid category name	1) Admin is successfully logged in to the system, 2) Categories exist in the system	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to category page, 4) Enter category name in search field, 5) Click search	1) Login succeeds, 2) Successful navigation to category list page, 3) Visibility of search field, 4) Display of matching category records		UI	Not Executed	215506J	
UI_CATEGORYPAGE_ADMIN_03	Verify sorting by category name works correctly	Test sorting functionality on category name column	1) Admin is successfully logged in to the system, 2) Multiple category records are available	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to category page, 4) Click category name sorting option	1) Login succeeds, 2) Successful navigation to category list page, 3) Visibility of sorting option, 4) Categories are displayed in alphabetical order by category name		UI	Not Executed	215506J	
UI_ADDCATEGORYPAGE_ADMIN_04	Verify validation message appears when category name is empty	Test required field validation for category name	1) Admin is successfully logged in to the system, 2) User is on the Add Category page	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to Add Category page, 4) Leave category name empty, 5) Click Save	1) Login succeeds, 2) Successful navigation to Add Category page, 3) Display of validation message "Category name is required" below the field		UI	Not Executed	215506J	
UI_ADDCATEGORYPAGE_ADMIN_05	Verify cancel button navigates back to category list page	Test functionality of cancel button on Add/Edit Category page	1) Admin is successfully logged in to the system, 2) User is on the Add Category page	1) Open login page, 2) Enter valid admin username & password, 3) Navigate to Add Category page, 4) Click Cancel button	1) Login succeeds, 2) Successful navigation to Add Category page, 3) Clickable "Cancel" button, 4) Navigation to category list page when "Cancel" button is clicked		UI	Not Executed	215506J	
UI_CATEGORYPAGE_USER_01	Verify regular user can view category list as paginated list	Test display and pagination of categories for regular user	1) User is successfully logged in as a non-admin user, 2) User is on the category list page, 3) Retrieved available category records from the backend	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate to category page	1) Login succeeds, 2) Successful navigation to category list page, 3) Visibility of category records as a paginated list		UI	Not Executed	215506J	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
UI_CATEGORYPAGE_USER_02	Verify "No category found" message is displayed when no records exist	Test empty category list behavior	1) User is successfully logged in as a non-admin user, 2) No category records are available	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate to category page	1) Login succeeds, 2) Successful navigation to category list page, 3) Visibility of "No category found" message on the page		UI	Not Executed	215506J	
UI_CATEGORYPAGE_USER_03	Verify regular user can filter categories by parent category	Test filtering functionality for categories	1) User is successfully logged in as a non-admin user, 2) Categories with parent category records exist	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate to category page, 4) Select parent category filter	1) Login succeeds, 2) Successful navigation to category list page, 3) Visibility of parent category filter option, 4) Display of categories related to selected parent category		UI	Not Executed	215506J	
UI_CATEGORYPAGE_USER_04	Verify Add Category button is not visible to regular users	Test access restriction for non-admin users	1) User is successfully logged in as a non-admin user	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate to category page	1) Login succeeds, 2) Successful navigation to category list page, 3) "Add Category" button is hidden from the page		UI	Not Executed	215506J	
UI_CATEGORYPAGE_USER_05	Verify Edit and Delete actions are hidden for regular users	Test restriction of edit/delete actions for non-admin users	1) User is successfully logged in as a non-admin user, 2) Category records exist	1) Open login page, 2) Enter valid non-admin username & password, 3) Navigate to category page	1) Login succeeds, 2) Successful navigation to category list page, 3) Edit and Delete actions are hidden or disabled for non-admin users		UI	Not Executed	215506J	
API_POST_CATEGORY_01	Verify admin can create category successfully	Test category creation API with valid data	1) Admin token available 2) API server running	1) Send POST request to /api/categories 2) Add valid category payload 3) Add admin authorization token 4) Click Send	1) Status code should be 201 Created 2) Category should be created successfully 3) Response body should contain category details		API	Not Executed	215506J	
API_POST_CATEGORY_02	Verify duplicate category creation is restricted	Test duplicate category validation	1) Category already exists 2) Admin token available	1) Send POST request with existing category name 2) Click Send	1) Status code should be 400 Bad Request 2) Proper validation error message should appear		API	Not Executed	215506J	
API_PUT_CATEGORY_03	Verify admin can update category details	Test update category API	1) Valid category ID exists 2) Admin token available	1) Send PUT request to /api/categories/{id} 2) Enter updated category data 3) Click Send	1) Status code should be 200 OK 2) Updated category details should be returned		API	Not Executed	215506J	
API_DELETE_CATEGORY_04	Verify admin can delete category	Test delete category API	1) Valid category exists 2) Admin token available	1) Send DELETE request to /api/categories/{id} 2) Click Send	1) Status code should be 200 OK or 204 No Content 2) Category should be deleted successfully		API	Not Executed	215506J	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
API_GET_CATEGORYPAGE_05	Verify admin can retrieve paginated category list	Test category pagination and search API	1) Categories exist in database 2) Admin token available	1) Send GET request to /api/categories/page?page=0&size=10 2) Click Send	1) Status code should be 200 OK 2) Paginated category records should be returned		API	Not Executed	215506J	
API_GET_CATEGORIES_01	Verify regular user can view category list	Test get all categories API for regular user	1) User token available 2) Categories exist	1) Send GET request to /api/categories 2) Add user authorization token 3) Click Send	1) Status code should be 200 OK 2) Category list should be displayed		API	Not Executed	215506J	
API_GET_CATEGORYBYID_02	Verify user can retrieve category by valid ID	Test get category by ID API	1) Valid category ID exists 2) User token available	1) Send GET request to /api/categories/{id} 2) Enter valid category ID 3) Click Send	1) Status code should be 200 OK 2) Correct category details should be returned		API	Not Executed	215506J	
API_POST_CATEGORY_03	Verify regular user cannot create category	Test role restriction for category creation	1) User logged in as non-admin	1) Send POST request to /api/categories 2) Add valid category payload 3) Add user token 4) Click Send	1) Status code should be 403 Forbidden 2) Access denied message should appear		API	Not Executed	215506J	
API_GET_CATEGORY_INVALID_ID_04	Verify user receives error for invalid category ID	Test invalid category ID handling	1) User token available	1) Send GET request to /api/categories/{invalidId} 2) Click Send	1) Status code should be 404 Not Found 2) Proper error message should appear		API	Not Executed	215506J	
API_GET_MAIN_CATEGORIES_05	Verify user can retrieve main categories only	Test main category retrieval API	1) Main categories exist 2) User token available	1) Send GET request to /api/categories/main 2) Click Send	1) Status code should be 200 OK 2) Only main categories should be returned		API	Not Executed	215506J	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
UI_AUTH_ADM IN_001	Verify that admin user can successfully login with valid credentials.	Test successful login functionality for admin users.	1) Admin account exists, 2) Admin user is on Login page	1) Open login page, 2) Enter valid admin username, 3) Enter valid password, 4) Click Login button	1) Login successful, 2) User redirected to Dashboard page, 3) Dashboard loads successfully		UI	Not Executed	215538H	
UI_AUTH_ADM IN_002	Verify validation message is displayed when admin submits empty login form.	Test mandatory field validation on login page.	Admin user is on Login page	1) Open login page, 2) Leave Username empty, 3) Leave Password empty, 4) Click Login button	1) "Username is required" displayed below Username field in red color, 2) "Password is required" displayed below Password field in red color		UI	Not Executed	215538H	
UI_AUTH_ADM IN_003	Verify logout success message is displayed for admin user.	Test logout functionality for admin users.	Admin is successfully logged in	1) Click Logout button	1) User is logged out successfully, 2) Success logout message is displayed, 3) User redirected to Login page		UI	Not Executed	215538H	
UI_DASHBOAR D_ADMIN_004	Verify dashboard summary information is displayed for admin user.	Test visibility of dashboard summary cards after successful login.	1) Admin is successfully logged in, 2) Admin user is on Dashboard page	1) Login as admin, 2) Navigate to Dashboard page	1) Dashboard loads successfully, 2) Category summary is visible, 3) Plants summary is visible, 4) Sales summary is visible		UI	Not Executed	215538H	
UI_DASHBOAR D_ADMIN_005	Verify active navigation menu is highlighted on Dashboard page for admin user.	Test navigation menu highlight functionality.	1) Admin is successfully logged in, 2) Admin user is on Dashboard page	1) Login as admin, 2) Navigate to Dashboard page	1) Dashboard page opens successfully, 2) Dashboard menu item is highlighted as active		UI	Not Executed	215538H	
UI_AUTH_USER _001	Verify regular user can successfully login with valid credentials.	Test successful login functionality for regular users.	1) User account exists, 2) User is on Login page	1) Open login page, 2) Enter valid username, 3) Enter valid password, 4) Click Login button	1) Login successful, 2) User redirected to Dashboard page, 3) Dashboard loads successfully		UI	Not Executed	215538H	
UI_AUTH_USER _002	Verify invalid login error message is displayed for regular user.	Test invalid login functionality using incorrect credentials.	User is on Login page	1) Open login page, 2) Enter invalid username and/or password, 3) Click Login button	1) Login fails, 2) Global error message "Invalid username or password." is displayed		UI	Not Executed	215538H	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
UI_AUTH_USER_003	Verify unauthorized user is redirected to login page when accessing dashboard without authentication.	Test unauthorized access handling for dashboard page.	User is not logged into the system	1) Open browser, 2) Directly access Dashboard URL	1) User is redirected to Login page, 2) Dashboard page is not accessible without login		UI	Not Executed	215538H	
UI_DASHBOARD_USER_004	Verify dashboard summary information is displayed for regular user.	Test visibility of dashboard summary cards for regular users.	1) User is successfully logged in, 2) User is on Dashboard page	1) Login as regular user, 2) Navigate to Dashboard page	1) Dashboard loads successfully, 2) Category summary is visible, 3) Plants summary is visible, 4) Sales summary is visible		UI	Not Executed	215538H	
UI_DASHBOARD_USER_005	Verify active navigation menu is highlighted on Dashboard page for regular user.	Test navigation menu highlight functionality for regular users.	1) User is successfully logged in, 2) User is on Dashboard page	1) Login as regular user, 2) Navigate to Dashboard page	1) Dashboard page opens successfully, 2) Dashboard menu item is highlighted as active		UI	Not Executed	215538H	
API_POST_ADMIN_001	Verify admin can login with valid credentials	Test valid admin authentication	1) Admin account exists, 2) Login API available	1) Send POST request to /api/auth/login, 2) Add valid admin username and password in request body, 3) Click Send	1) Status code should be 200 OK, 2) JWT token should be returned in response body		API	Not Executed	215538H	
API_POST_ADMIN_002	Verify admin login fails with invalid password	Test invalid admin login validation	1) Admin account exists, 2) Login API available	1) Send POST request to /api/auth/login, 2) Add valid username and invalid password, 3) Click Send	1) Status code should be 400 Bad Request or authentication failure response, 2) Error message should appear		API	Not Executed	215538H	
API_GET_ADMIN_003	Verify admin can retrieve category summary	Test category summary API with admin authorization	1) Admin token available, 2) Categories exist in database	1) Send GET request to /api/categories/summary, 2) Add admin authorization token, 3) Click Send	1) Status code should be 200 OK, 2) Category summary data should be returned		API	Not Executed	215538H	
API_GET_ADMIN_004	Verify admin can retrieve plant summary	Test plant summary API with admin authorization	1) Admin token available, 2) Plants exist in database	1) Send GET request to /api/plants/summary, 2) Add admin authorization token, 3) Click Send	1) Status code should be 200 OK, 2) Plant summary details should be returned		API	Not Executed	215538H	
API_GET_ADMIN_005	Verify admin can retrieve sales records	Test sales dashboard API with admin authorization	1) Admin token available, 2) Sales records exist	1) Send GET request to /api/sales, 2) Add admin authorization token, 3) Click Send	1) Status code should be 200 OK, 2) Sales records should be returned successfully		API	Not Executed	215538H	
API_POST_USER_001	Verify user can login with valid credentials	Test valid user authentication	1) User account exists, 2) Login API available	1) Send POST request to /api/auth/login, 2) Add valid user username and password in request body, 3) Click Send	1) Status code should be 200 OK, 2) JWT token should be returned in response body		API	Not Executed	215538H	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
API_POST_USER_002	Verify user login fails with empty credentials	Test empty login request validation	Login API available	1) Send POST request to /api/auth/login, 2) Leave username and password empty, 3) Click Send	1) Status code should be 400 Bad Request, 2) Validation or error message should appear		API	Not Executed	215538H	
API_GET_USER_003	Verify unauthorized user cannot access sales details without valid token	Test unauthorized access validation for sales API	Sales records exist	1) Send GET request to /api/sales/{id}, 2) Do not add authorization token or use invalid token, 3) Click Send	1) Status code should be 401 Unauthorized or 403 Forbidden, 2) Access denied error message should appear		API	Not Executed	215538H	
API_GET_USER_004	Verify user can retrieve category summary	Test category summary API with user authorization	1) User token available, 2) Categories exist in database	1) Send GET request to /api/categories/summary, 2) Add user authorization token, 3) Click Send	1) Status code should be 200 OK, 2) Category summary data should be returned		API	Not Executed	215538H	
API_GET_USER_005	Verify user can retrieve plant summary	Test plant summary API with user authorization	1) User token available, 2) Plants exist in database	1) Send GET request to /api/plants/summary, 2) Add user authorization token, 3) Click Send	1) Status code should be 200 OK, 2) Plant summary details should be returned		API	Not Executed	215538H	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
UI_PLANTATIONPAGE_ADMIN_01	Verify add a plant button appear to the admin role	verify that add a plant button only visible for the admin role	1) user is logged in as admin-role 2) Admin is in the plant page	1) go to login page, 2) Enter valid admin username, and password 3) Click Login button 4) go to plant page	1) successful login, 2) move to plants page successfully, 3) appear "Add a Plant" button on the plant page		UI	Not Executed	215535V	
UI_PLANTATIONPAGE_ADMIN_02	Verify admin can add a new plant with valid data	verify that admin can add a new plant with valid data (plant name , quantity , sub category and the price)	1) user is logged in as admin-role 2) Admin is in the plant page	1) go to login page, 2) Enter valid admin username, and password 3) Click Login button 4) go to plant page click add a plant button 5) Enter valid plant name in the Plant Name field (Red Anthoorium) 6) Select sub category (Anthoorium) 7) Enter valid price in the Price field (200) 8) Enter valid quantity in the Quantity field (20) 9) click save button	1) a Success Message is displayed. 2) the system navigates back to the Plants page"		UI	Not Executed	215535V	
UI_PLANTATIONPAGE_ADMIN_03	Verify Plant Name, Sub-category, Price, and Quantity are required fields	Verify that the system restricts form submission and triggers mandatory field validation messages when Plant Name, Sub-category, Price, and Quantity are left	1) user is logged in as admin-role 2) Admin is in the plant page	1) Click the Add a Plant button. 2) Leave Plant Name, Sub category, Price, Quantity empty. 3) Click the save button. 4) Verify that appear required message related to each input fields"	1) Plant name must be between 3 and 25 characters and Plant Name is required alert message below the plant Name field 2) Category is required alert message below the category field		UI	Not Executed	215535V	
UI_PLANTATIONPAGE_ADMIN_04	Verify the system successfully searches for plants with multi-word names.	Verify that the search functionality accurately processes inputs containing multiple words (red anthoorium) and displays the correct, relevant results from the database.	1) user is logged in as admin-role 2) Admin is in the plant page	1) go to Plants page. 2) Type a valid multi-word plant name (red anthoorium) into the "Search Plant" field. 3) Choose the relevant option from the "All Categories" dropdown. 4) Click the "Search" button.	1) The system filters the list and accurately displays the "Red Anthurium" record.		UI	Not Executed	215535V	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
UI_PLANTATIONPAGE_ADMIN_05	Verify admin can successfully edit existing plant data with valid plant data	Verify that an admin can successfully update an existing plant's details (Plant name , category ,price and quantity) , save changes, and view the updated plant data in the plant list.	1) user is logged in as admin-role 2) Admin is in the plant page 3) Click the 'Edit' button corresponding to the selected plant record in the list.	1) Go to the login page. 2) Enter a valid admin username and password. 3) Click the "Login" button. 4) Go to the Plants page. 5)Click the Edit button on a particular plant data row (Red Anthurium). 6) Enter the updated plant name in the White Orkind field. 7) Select the updated sub-category from the dropdown. 8) Enter the updated price in the Price field. 9) Enter the updated quantity in the Quantity field. 10) Click the Save button.	1) a Success Message is displayed.(Plant updated successfully)with updated data 2)the system navigates back to the Plants page"		UI	Not Executed	215535V	
UI_PLANTATIONPAGE_USER_01	Verify the system successfully searches for plants with multi-word names.	Verify that the search functionality accurately processes inputs containing multiple words (red anthoorium) and displays the correct, relevant results from the database.	1) user is logged in as user-role 2) user is in the plant page	1) go to Plants page. 2) Type a valid multi-word plant name (red anthoorium) into the "Search Plant" field. 3)Choose the relevant option from the "All Categories" dropdown. 4)Click the "Search" button.	1) The system filters the list and accurately displays the "Red Anthurium" record.		UI	Not Executed	215535V	
UI_PLANTATIONPAGE_USER_02	Verify clicking the "Reset" button clears all search filters and restores the full plant records display	Verify that when the user clicks the "Reset" button, all active input fields and dropdowns are successfully cleared, and the plant data table is updated to display all original records from the database.	1) user is logged in as user-role 2) user is in the plant page	1) Navigate to the Plants List page. 2)Enter text into the "Search Plant" field and select a specific option from the 3) "All Categories" dropdown to filter the list. 4) Click the "Search" button to view the filtered results. 5) Click the "Reset" button. 6) Observe the input fields, dropdown selection, and the plant data list.	1) Clicking the "Reset" button immediately clears the text in the "Search Plant" field. 2) The "All Categories" dropdown reverts back to its default placeholder/state. 3) The plant list updates dynamically to show all available records, exactly how it was before searching.		UI	Not Executed	215535V	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
UI_PLANTATIONPAGE_USER_03	verify the "No plants found" empty state behavior on the plants list dashboard.	verify that the system properly handles an empty plant list scenario. It ensures that when no plant records exist in the system, the plant list page displays a clear and user-friendly "No plants found" message.	1) user is logged in as user-role 2) user is in the plant page	navigate to the plant page	displaying "No plants found" instead of an empty grid.		UI	Not Executed	215535V	
UI_PLANTATIONPAGE_USER_04	verify visual indicator logic for low-stock plant products.	Verify that the user interface dynamically appends a "Low" stock badge to any plant item with an inventory level below 5, while ensuring the badge remains hidden for items with sufficient stock (Quantity ≥ 5)	1) user is logged in as user-role 2) user is in the plant page	1) Navigate to the plant page. 2) Locate a plant row where the quantity is under 5. 3) Locate a plant row where the quantity is 5 or more.	1) The data table loads and populates records correctly. 2) A visible "Low" indicator tag is attached to the plant entries with a quantity < 5 . 3) No indicator tag or warning badge is applied to the entries where the quantity satisfies the ≥ 5 condition.		UI	Not Executed	215535V	
UI_PLANTATIONPAGE_USER_05	verify multi-column sorting functionality (Plant name , price , quantity) for the plant data table	Verify that the plant list data grid correctly processes ordering requests when sorting by Plant Name, Price, and Stock Quantity in both ascending and descending sequences.	1) user is logged in as user-role 2) user is in the plant page 3)The system contains a set of plant records with different names, pricing values, and quantities.	1) Click the column header to toggle sorting for Plant Name (Ascending and Descending). 2) Click the column header to toggle sorting for Price (Low-to-High and High-to-Low). 3) Click the column header to toggle sorting for Quantity (Low-to-High and High-to-Low).	1) The list dynamically rearranges alphabetically by Plant name (A-Z) and reverse alphabetically (Z-A). 2) The list dynamically rearranges numerically by Price values from lowest to highest and vice versa. 3) The list dynamically rearranges numerically by remaining stock levels from lowest to highest and vice versa.		UI	Not Executed	215535V	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
API_POST_PLANTATIONPAGE_ADMIN_01	Verify admin can add a new plant successfully	verify category creation API with valid data	1) admin barrier token available 2) server is running 3) database is connected	1) Send POST request to api/plants/category/{category_ID} 2) Add valid category payload { "id": 0, "name": "Anthurium New Plant", "price": 150, "quantity": 25, "category": { "id": 3, "name": "Red Anthoorium", "parent": null, "subCategories": [] } } 3) Add admin authorization token 4) Click Send	1) Status code should be 201 Created 2) a new plant record should be created successfully 3) Response body should contain category details		API	Not Executed	215535V	
API_GET_PLANTATIONPAGE_ADMIN_02	Verify successful retrieval of plant record by ID	verify that the single plant lookup endpoint correctly returns matching inventory details and satisfies data schema constraints when queried with an authenticated token.	1) Admin session is authenticated with a valid Barrier token. 2) Plant record with target ID 2 is existing in the database.	1) Initialize the request header with the active Bearer token. 2) Dispatch an HTTP GET request to /api/plants/2. 3) Intercept and parse the JSON response body. 4) Assert the network transaction status code.	Server validates authentication and returns an HTTP 200 OK status.		API	Not Executed	215535V	
API_DELETE_PLANTATIONPAGE_ADMIN_03	Verify successful deletion of a plant record by ID	verify that an authorized administrator can permanently remove an existing plant record using its unique identifier via the API.	1) Admin session is authenticated with a valid JWT token. 2) A valid plant record exists in the system database.	1) Attach the admin Bearer token to the Authorization request header. 2) Send an HTTP DELETE request to /api/plants/{id} (using a valid plant ID) 3) Execute the request and capture the response.	1) The API server successfully processes the deletion and returns an HTTP 204 No Content status code 2) Data verification confirms the targeted plant record is completely removed from the database grid.		API	Not Executed	215535V	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
API_GET_PLANTATIONPAGE_ADMIN_04	Verify filtering plants by category ID	verify that if the API successfully fetches the list of plants belonging to a specific category ID.	1) Admin authentication token is generated. 2) Plant records exist under category ID 2.	1) Include the valid Bearer token in the Authorization header. 2) Send a GET request to /api/plants/category/2. 3) Capture and parse the JSON response body. 4) Validate response status code and data structure.	1) API server returns an HTTP 200 OK status code. or HTTP 204 No content status code		API	Not Executed	215535V	
API_DELETE_PLANTATIONPAGE_ADMIN_05	Validate handling of non-existent plant deletion	Check if the API properly triggers a 404 resource missing error when attempting to remove a plant ID that is absent from the database.	1) Admin authentication token is valid. 2) Target plant ID 99999 does not exist in the database.	1) Construct an HTTP DELETE request for /api/plants/99999. 2. Append the valid Admin token in the Authorization header.	1) API router successfully catches the invalid resource target and returns HTTP 404 Plant not found. 2) The error payload returns an explicit ErrorResponse schema containing standard keys (status, error, message, timestamp).		API	Not Executed	215535V	
API_POST_PLANTATIONPAGE_USER_01	Verify User-role cannot add a plants data via API	Verify that the API endpoint restricts unauthorized roles from inserting new data records into the database.	1) User is authenticated with a non-admin token (TESTUSER). 2) The target sub-category ID exists in the system registry.	1) Send a POST request to /api/plants/category/{categoryId} . 2) Pass the non-admin Bearer token in the Authorization header. 3) Provide a valid plant creation JSON body with name, price, and quantity.	1) API server rejects the request with HTTP 403 Forbidden status. 2) Response body safely triggers an "Access Denied" payload.		API	Not Executed	215535V	
API_PUT_PLANTATIONPAGE_USER_02	Verify User-role cannot update plant data via API	Verify that the API prevents users without administrator privileges from updating existing plant data entries.	1) User is authenticated with a non-admin token (TESTUSER). 2) The target sub-category ID exists in the system registry. 3) Target plant record with ID 2 is present in the system database.	1) Execute a PUT request to /api/plants/{id} using plant ID 2. 2) Include the non-admin Bearer token in the Authorization header. 3) Provide a valid payload containing modified data (name, price, quantity).	1) System securely blocks the request with an HTTP 403 Forbidden status code.		API	Not Executed	215535V	

Test Identifier	Test Summary	Test Description	Precondition	Test Steps	Expected Result	Actual Results	UI / API	Status	Tester	Defect ID
API_DELETE_PLANTATIONPAGE_USER_03	Verify User-role cannot delete plant data via API	Verify that the API restricts users without administrator privileges from deleting existing plant records from the database.	1) User is authenticated with a non-admin token (TESTUSER). 2) The target sub-category ID exists in the system registry. 3) Target plant record with ID 2 is present in the system database.	1) Execute a DELETE request to /api/plants/{id} using plant ID 2. 2) Pass the non-admin Bearer token in the Authorization header. 3) Send the request and intercept the network response	1) System securely blocks the execution and returns an HTTP 403 Forbidden status code.		API	Not Executed	215535V	
API_GET_PLANTATIONPAGE_USER_04	verify user-role can get access plant summary data	verify that plant inventory summary retrieval for standard users	1) Authenticated via a user-role token. 2) Test data populated with multi-level stock values in database.	1) Initialize an HTTP GET request to /api/plants/summary. 2) Pass the standard user JWT token in the Authorization header. 3) Execute the request and capture the JSON payload. 4) Assert response payload keys and status codes.	2) API server successfully processes the request and returns an HTTP 200 OK status code.		API	Not Executed	215535V	
API_GET_PLANTATIONPAGE_USER_05	verify API boundary constraints for pagination query parameters	verify that if the paged search endpoint gracefully rejects or normalizes out-of-bound page and size parameters.	1) User session is active with a valid user-role token (TESTUSER). 2) Plant inventory grid contains loaded datasets in the repository.	1) Send a GET request to /api/plants/paged?page=-1 (Negative page threshold). 2) Send a GET request to /api/plants/paged?size=0 (Zero size boundary). 3) Send a GET request to /api/plants/paged?size=1000 (Excessive size stress test). 4) Append the authorization token header in each request and analyze response behaviors.	1) System gracefully processes the query capped at maximum threshold or rejects via HTTP 400 2) System triggers HTTP 400 Bad Request (since size minimum is 1) or applies the system default page size.		API	Not Executed	215535V
